

Game summary

It's an alternative steampunk past. Steel, steam and oil have become the definitive resource to drive the military forces of their time: heavy, giant steel colossus, controlled by half a dozen men and women. Players choose their side and start to either take on missions against players of the other factions to gain their own level. Or they hunt Marauders, which they steal resources from needed to improve and maintain their combat vehicles. Switching between dynamic, fast-paced PvP action, a variety of game modes and long term development makes this game a fresh installment in PvP online games.

Unique Selling Points
